11. (Currently Amended) The gateway of Claim 10, wherein: A gateway for communicating telecommunication information, comprising:
a telecommunication interface module operable to receive first telecommunication information for a first subscriber and second telecommunication information for a second subscriber from a telecommunication network;
one or more packetization modules operable to generate first data packets for communicating the first telecommunication information according to a first data communication protocol associated with the first subscriber and to generate second data packets for communicating the second telecommunication information according to a second data communication protocol associated with the second subscriber; and
one or more network interface modules operable to communicate the first data packets using a first data link associated with the first subscriber and to communicate the second data packets using a second data link associated with the second subscriber, wherein the first data link communicates the first data packets to a digital subscriber line access multiplexer (DSLAM); and the second data link communicates the second data packets to a cable modem termination system (CMTS) or a base station controller (BSC).

25. (Currently Amended) ~~The method of Claim 24, further comprising:~~ A method for communicating telecommunication information, comprising:

receiving first telecommunication information for a first subscriber from a telecommunication network;

generating first data packets for communicating the first telecommunication information according to a first data communication protocol associated with the first subscriber;

receiving second telecommunication information for a second subscriber from the telecommunication network;

generating second data packets for communicating the second telecommunication information according to a second data communication protocol associated with the second subscriber;

communicating the first data packets using a first data link associated with the first subscriber;

communicating the second data packets using a second data link associated with the second subscriber;

communicating the first data packets to a digital subscriber line multiplexer (DSLAM) using the first data link; and

communicating the second data packets to a cable modem termination system (CMTS) or a base station controller (BSC) using the second data link.

29. (Currently Amended) ~~The method of Claim 15, further comprising:~~ A method for communicating telecommunication information comprising:

receiving first telecommunication information for a first subscriber from a telecommunication network;

generating first data packets for communicating the first telecommunication information according to a first data communication protocol associated with the first subscriber;

receiving second telecommunication information for a second subscriber from the telecommunication network;

generating second data packets for communicating the second telecommunication information according to a second data communication protocol associated with the second subscriber;

communicating the first data packets to a digital subscriber line access multiplexer (DSLAM) using the first data communication protocol;

communicating the first data packets from the DSLAM to an integrated access device (IAD) using a digital subscriber line;

communicating the second data packets to a cable modem termination system (CMTS) using the second data communication protocol; and

communicating the second data packets from the CMTS to a media terminal adapter (MTA) using a cable link.

30. (Currently Amended) ~~The method of Claim 15, further comprising:~~ A method for communicating telecommunication information, comprising:

receiving first telecommunication information for a first subscriber from a telecommunication network;

generating first data packets for communicating the first telecommunication information according to a first data communication protocol associated with the first subscriber;

receiving second telecommunication information for a second subscriber from the telecommunication network;

generating second data packets for communicating the second telecommunication information according to a second data communication protocol associated with the second subscriber;

communicating the first data packets to a digital subscriber line access multiplexer (DSLAM) using the first data communication protocol;

communicating the first data packets from the DSLAM to an integrated access device (IAD) using a digital subscriber line;

communicating the second data packets to a base station controller (BSC) using the second data communication protocol; and

communicating the second data packets from the BSC to a wireless network interface unit (WNIU) using a wireless link.

31. (Amended) ~~The method of Claim 15, further comprising:~~ A method for communicating telecommunication information, comprising:

receiving first telecommunication information for a first subscriber from a telecommunication network;

generating first data packets for communicating the first telecommunication information according to a first data communication protocol associated with the first subscriber;

receiving second telecommunication information for a second subscriber from the telecommunication network;

generating second data packets for communicating the second telecommunication information according to a second data communication protocol associated with the second subscriber;

communicating the first data packets to a cable modem termination system (CMTS) using the first data communication protocol;

communicating the first data packets from the CMTS to a media terminal adapter (MTA) using a cable link;

communicating the second data packets to a base station controller (BSC) using the second data communication protocol; and

communicating the second data packets from the BSC to a wireless network interface unit (WNIU) using a wireless link.

54. (Original) A system for communicating telecommunication information, comprising:

a gateway operable to associate each of a plurality of subscribers with a data communication protocol, to receive telecommunication information for subscribers from a telecommunication network, and to generate data packets for communicating each subscriber's telecommunication information according to the data communication protocol associated with each subscriber;

a digital subscriber line access multiplexer (DSLAM) operable to communicate at least some of the data packets generated by the gateway to an integrated access device (IAD) using a digital subscriber line; and

a cable modem termination system (CMTS) operable to communicate at least some of the data packets generated by the gateway to a media terminal adapter (MTA) using a cable link.

55. (Original) The system of Claim 54, wherein the gateway generates data packets for communication to the DSLAM according to a first data communication protocol and generates data packets for communication to the CMTS according to a second data communication protocol.

56. (Original) The system of Claim 54, further comprising a base station controller (BSC) operable to communicate at least some of the data packets generated by the gateway to a wireless network interface unit (WNIU) using a wireless link.
